1. About Us

Richardson Roofing is a multi-disciplined building envelope contractor, able to take projects from an outline design concept through to a finished installation constructed to the highest standards. We offer a full and diverse spectrum of building solutions tailored to each contract type. Offering bespoke building envelope services for all enquiries. Richardson Roofing is recognised as a leading tier 1 contractor within the market. We provide a complete range of specialist solutions for all your roofing needs.

As one of the foremost craft skilled companies specialising in traditional and modern roofing techniques, we offer in depth experience of dealing with both large and small contracts across the UK and within the international market. We are Industry accredited and product approved by leading manufacturers! Richardson Roofing stands out as a contractor because of our ability to not only deliver the whole envelope of a project, but also for our wealth of retained experience and knowledge. During our many years of operation (39 years in 2019), we've gained a vast understanding of the roofing industry including complex roofing techniques and skills which have been refined, sharpened and shared within the company. RRCL offers client satisfaction that is second to none with a reputation that instills confidence. Richardson Roofing is a contractor that continues to be awarded by a list of the most prestigious bodies within the industry!

2. Office

Company operations are managed from the head office located in Staines upon Thames, where the majority of the fifty permanent office staff are based. Workshop and storage facilities are sited adjacent to the Staines office. In addition to our head office we also have a dedicated team of draughtsman located in our Darlington office.

3. Departments

In order to maximise efficiency RRCL is structured by different departments in relation to the different disciplines that we operate in, the reason being that we have a team of specialists within each field working diligently to deliver the finished project to the highest quality possible. Each department boasts specialists dedicated to their field of expertise who work cohesively to ensure the utmost success of each project from the planning stage right through to implementation.

4. Design

This department is comprised of highly skilled draughtsmen and roof installation experts who provide key technical drawings and advice on structural design. Our design and technical consultation service is carried out from our head office in Staines as well as our offices in Darlington and the Isle of Wight. Each of the companies are under the Richardson banner and have access to drawing office services and to specialist fabrication facilities. Richardson Roofing is regularly asked to construct mock-up installations for appearance, weather, fire and acoustic assessment.

5. Joinery Workshop

This is rather unique to Richardson Roofing, very few roofing contractors are equipped with their own onsite carpentry and joinery facilities. This department is located at our head office in Staines where we have a permanent on site joiner. The joinery workshop is equipped with the necessary heavy machinery to construct a wide array of products. This serves RRCL well as it gives us greater control over the quality of what is being produced which is most beneficial to our clients. Our Joinery department enables us to create bespoke designs to suit any specific requirement and our clients also appreciate that they do not need to source yet another subcontractor for this type of work.

6. Estimating

All of our main contractors are supported by the estimating department with the reliable return of detailed and accurate tenders. Additionally, the estimators contribute to the technical consultation service provided by the company by giving budget and value engineering advice where required. If needed our skilled team are able to provide on-site visits for further consultation.

7. Project Management

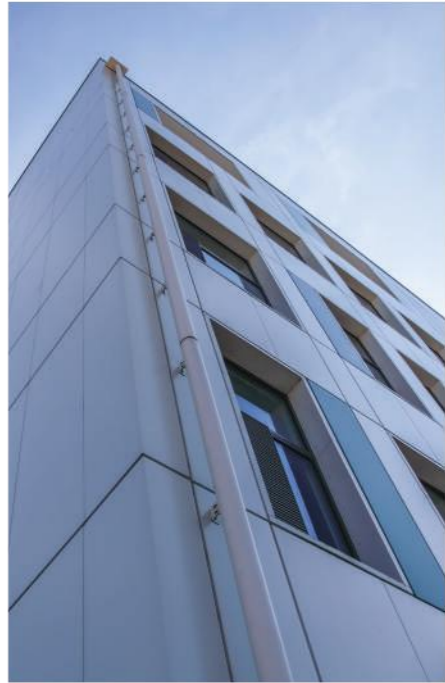

Secured projects are managed either by permanently site based managers or by visiting contract managers. Each site in operation under Richardson Roofing has a full time SMSTS (Site Management Safety Training Scheme) operative. Support services for the front line managers are provided from the Head Office by a dedicated team of document administrators, procurement managers, surveyors and ancillary staff.

8. Health and Safety

Headed up by a board level director, our in house Health and Safety department reviews every project and produces risk assessments and method statements together with operation and maintenance documentation. The company accident record and the National Awards both highlight how this department regularly receives its evidence of the seriousness with which this aspect of our business is viewed by all personnel.

9. Tradesmen

The collective experience of the one hundred and fifty plus tradesmen employed across the different trading companies is seen by Richardson Roofing as its most highly prized asset. The tradesmen on site coupled with our in house team collaboration is a major contributor to the successful execution of the work that the companies undertake.

Slating, tiling and lead work.
Housing developments, schools, hospitals,
refurbishment and conservation projects.

Metal sheet roof and wall cladding installations,
single ply membranes and liquid applied
weatherings.
Commercial premises, schools, hospitals, hotels,
shopping centres, rail and infrastructure projects.

above. Available outside the UK.

Gallery

Ancaster Gate

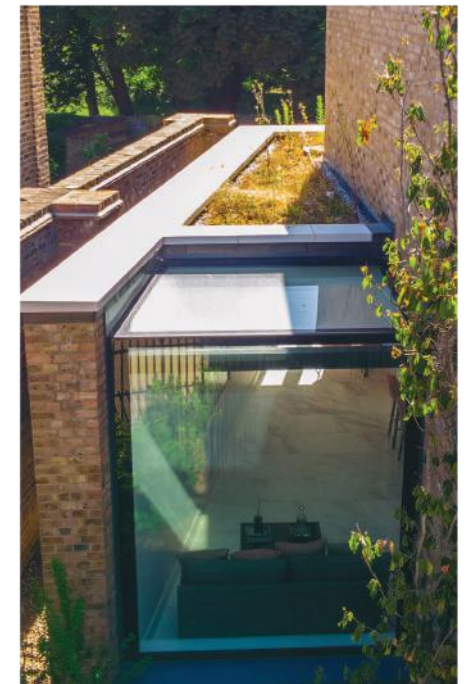

Main contractor: London Square

Architect: Paul Davis & Partners

Value: £920,000.00

Description:

A total re-car cass of the existing roof, installation and re-slating in natural slate (penrhyn) of the existing Grade II listed building Kenwood house, project contained both reclaimed and new slates. Fabrication and installation of lead dormers along with lead cappings and flashings. Hot melt applied on all flat roofs and installation of skylights.

The Fusion Building, Bournemouth University

Main contractor: Willmott Dixon

Architect: BDP

Value: £1,010,000.00

Description:

Installation of industrial cladding, standing seam roofing, inverted flat roofing, ACM rainscreen cladding, aluminium cappings, fascias and soffits, CA prime rainscreen and support system and Alucobond.

Great Pagoda

Main contractor: Blue Sky Building

Architect: Austin-Smith: Lord

Value: £280,000.00

Description:

Restoration of the historic Grade II listed building at Kew Gardens. Each of the ten storeys has a natural slate and copper sheet roof. The top cupola roof was entirely covered with sheet copper whilst the nine octagonal canopy roofs below the cupola were covered with natural Welsh slate and sheet copper cappings to each of the hips.

Lawn Tennis Association

Main contractor: ISG Construction Ltd

Architect: N/A

Value: £2,240,000.00

Description:

Required restriping of the existing roof and a complete new installation and careful redesign of zinc, sarnafil and substrate.

Photo Accreditation:

Angus Gibson & Paul Kozlowski

The Woo Building, Royal College of Art

Main contractor: Vinci Construction

Architect: Haworth Tompkins

Value: £895,000.00

Description:

Installation of Cadisch Roof and Wall Profiles, Sarnafil
Single Ply and Rainscreens.

20 Grosvenor Square

Main contractor: Multiplex Construction Europe Ltd

Architect: Squire and Partners

Value: £4,200,000.00

Description:

Slating to the mansard roof, design, fabrication and installation of 57 CDP dormers. Extensive stone paving and green walls to each terrace level. Installation of mansafe system for upper floor access together with davit base fixing points for maintenance.

Woolwich Portal, Crossrail

Main contractor: Balfour Beatty

Architect: Crossrail Ltd

Value: £590,000.00

Description:

Aluminium subframe installed to a concrete frame building and covered with varied coloured terracotta NBK baguettes that were created as a removable sectional frame. Installation of Trespa Cladding alongside CA Systems, PPC Aluminium rainscreen (bespoke & prime), support work and closure flashings.

Three Minsters House

Main contractor: Morgan Sindall

Architect: N/A

Value: £870,000.00

Description:

Total restriping and removal of existing roof and a complete replacement of roof covering and substrate due to a number of leaks attributed to design and installation failures. Eighty-five tonnes of lead, covering an area of 1300m² was installed and designed. Installation of Bauder felt roof system to crown flat roofs.

Lambeth Garden Museum

Main contractor: Roof Ltd

Architect: Dow Jones Architects

Value: £205,000.00

Description:

The pavilions are clad in bespoke bronze shingles that were designed in house. The interlocking bronze shingles have concealed fixings and have been folded at the edges for strength. All the shingles have been wrapped tightly around the façade to give a clear and crisp outline finish. Our design department created mechanical extract vents which were integrated into the cladding shingles by creating custom bronze cowls which protrude outwards. The architect wanted an illusion of all equal full width shingles, this was rather complex given that there was a lot of protrusions on site, however our design team was able to ingeniously create a false illusion of this. Each elevation had a non-divisible width and random non modular window openings. Therefore, this illusion of equal full width shingles was only achievable by introducing 78 numbered bespoke different width shingles.

Photo accreditation: Anthony Coleman

Ludgate House

Main contractor: Islandbridge Properties

Architect: Clear Architects

Value: £140,000.00

Description:

Installation of all Zinc and linetherm substrate. Introduction of ventilation through the ridge. Revised in board gutter detail and change of design layout and configuration of the radial gable end.

This project received the accolade of Roof of the Year 2019 by the National Federation of Roofing Contractors at the UK roofing Awards for its excellent and complex design features

Battersea Arts Centre

Main contractor: 8build

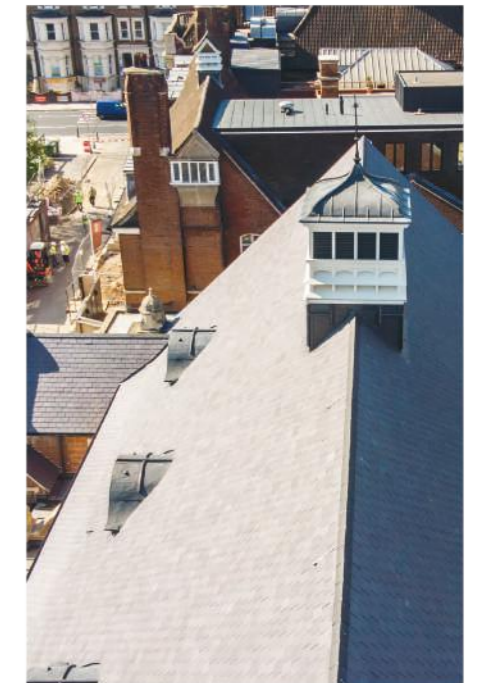

Architect: Haworth Tompkins

Value: £350,000.00

Sector: Arts

Description:

Battersea Arts Centre is a Grade II listed building that was designed in 1891 by EW Mountford. The upper parts of the Grandhall were devastated by a fire. The project included a total replacement of natural slate (penrhyn). Pre-fabrication of ornamental leadwork (spire dome & eyebrow dormers) and re-stripping and replacement of lead flat roofs.

Ramsgate Fire Station

Main contractor: Morgan Sindall

Architect: Pick Everard

Value: £485,000.00

Description:

Euroclad standing seam roofing,
euroclad profiled roofing and cladding.
Saranfil singleply roofing was installed
along with PPC aluminium flashings.
Rimex shingles were used to create the
fantastic aesthetics of the building.

Royal Mint

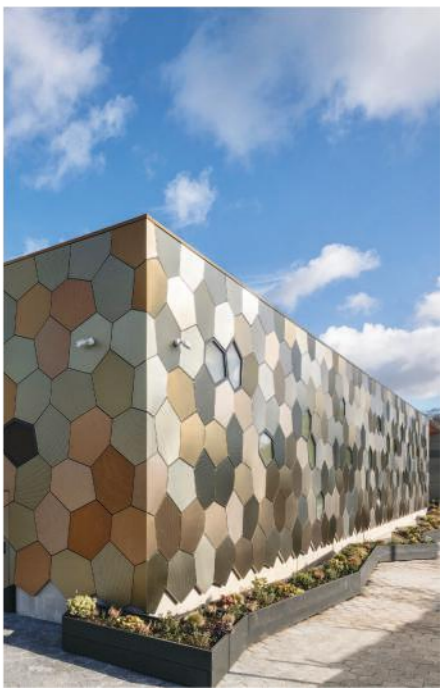

Main contractor: ISG

Architect: Richard Roberts, Cass Associates

Value: £570,000.00

Description:

Installation of Rimex hexagon shingles installed over Kingspan composite wall cladding panels to create a bold and unique facade to this landmark building. Our design department had to overcome the irregular set out of the hexagonal discs, whilst aligning against a support system, this was a complex and difficult engineering feat.

Premier Inn

Main contractor: Whitbread Group PLC

Architect: Axiom Architectst

Value: £745,000.00

Description:

A new build which included a metsec frame, a brickwork exterior and a single ply flat roof. Proteus SC rainscreen cladding infill between the brickwork which consisted of aluminium PPC cassette panels and PPC mesh features. Installation of PPC Proteus SC panels on the Ground level.
